Parul Krisani

DOB- 12 January 2010

Report for 2023-24 (First Term)

Attendance- 183 out of 183 days

Introduction

My name is Parul Krishna, and I am 14 years old. I study at Auro-Mira Vidya Mandir in Kechla. I come from Panasput and stay away from my family, residing in the hostel. I am currently in the 10th class, attending school every day and actively participating in all classes. I maintain proper behaviour with teachers, Didi, and Bhaiya. I actively listen to the teachers and my friends, ensuring a clean and orderly environment.

Yogasana

I enjoy practicing Yogasana as it helps keep my body fit and healthy. We have daily sessions from 6:00 am to 6:30 am, where we perform various asanas like Padmasana, Matsyasan, Chakrasana, and Surya Namaskar. I make it a point to be on time for Yogasana class and listen attentively to the instructor, Bhaiya.

Science

In our science class, we are currently studying the 8th-grade curriculum, with our focus on the chapter "Refraction and Dispersion of Light." Over the course of the academic year, we have already covered various chapters, including "Force and Pressure,"

"Friction," "Sound," "Some Natural Phenomena," "Chemical Effects of Electric Current," "Reflection of Light," and the current chapter on "Refraction and Dispersion of Light."

Throughout these chapters, our science class has been actively engaged in conducting numerous experiments and activities. We explored the topics of pressure, force, and friction through practical experiments. Additionally, we delved into the subject of light, experimenting to confirm the laws of reflection. We also conducted various experiments involving electric devices, which added a hands-on dimension to our learning experience.

While I appreciate the practical aspects of science class, I must admit that I sometimes find it challenging to maintain focus during lessons. There are instances when my attention wavers in class, which is an area I am actively working on to improve.

On the homework front, I consistently complete the assignments given by our teachers and ensure they are ready for submission in class. It's important to me to fulfil these academic requirements.

Moreover, upon concluding each chapter, our class takes a test to assess our understanding of the material. I strive to perform well on these tests, although there are times when I may not achieve the desired results.

Overall, I am enthusiastic about science and remain committed to my studies in this subject. While there are areas for improvement, I believe that with dedication and

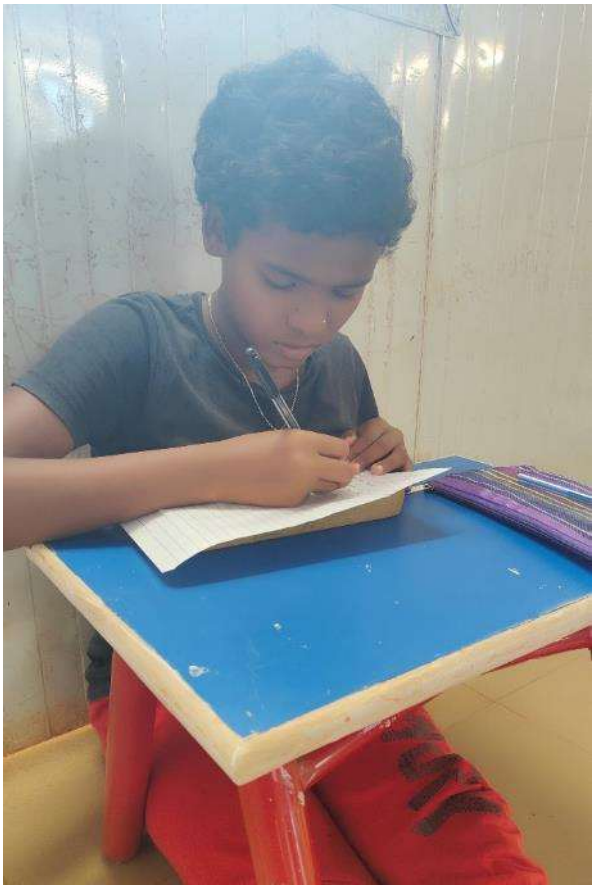
effort, I can excel further in science class and achieve the results I aim for. If you have any further questions or require additional information, please do not hesitate to ask.

Maths

In my maths class, I'm currently working on the 8th-grade book by RS Agarwal, which I started on August 31st. Before that, I had just finished the 7th-grade book. While studying the 7th-grade book, I encountered some difficulties with specific chapters, including Algebra, Percentage, Profit and Loss, Congruence, and Mensuration. However, in the 8th-grade book, I've successfully covered chapters on Rational Numbers, Exponents, Square and Square Roots, and Cube and Cube Roots. After completing each chapter, I make sure to take the chapter test.

I don't face any problems in the 8th-grade book because I had already covered these chapters in the 7th-grade book. Whenever I encounter a problem or have questions, I always seek help from my teacher. I also go to my teacher for checking after completing each exercise. Although I sometimes face challenges with calculations, I put in

my best efforts to improve. I find that when my teacher explains a chapter, I can usually understand it well.



Hindi

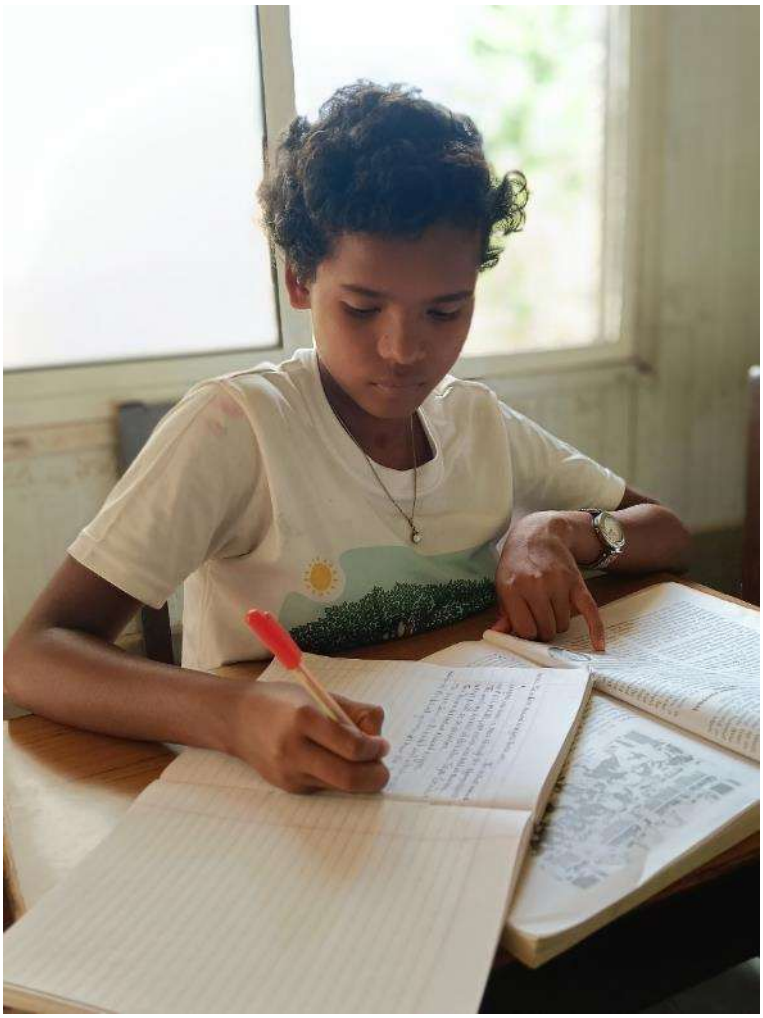
I have completed the 7th class book in August and have now moved on to the 10th class book. During the 7th book test, I passed, even though I was initially afraid to ask questions. I worked hard during my time with the 7th book. In Hindi class, we cover various aspects like reading, dictation, bookwork, story writing, and more. After completing each chapter, we are given a test by our teacher, Didi. Sometimes, I find the tests challenging. During self-reading, I tend to read slowly, but I'm working on improving my reading speed. My Hindi handwriting may not be perfect, but Didi can understand what I write. Poems sometimes pose a challenge, but I do my best to understand them. When I don't comprehend a poem, I ask Didi for assistance. Distracting behaviour among other students can sometimes hinder my focus. I have now advanced to the 10th book in Hindi grammar, and I have previously completed 17 chapters from the 6th book. I find grammar relatively easy, and I can answer questions correctly. However, I tend to get nervous when Didi asks questions out of order. Despite this, I understand that asking more questions helps me learn.

English

Currently, I'm studying the 10th-grade NIOS syllabus in English. Before this, I was involved in various activities like reading books in groups, studying grammar, communication, comprehension, and dictation. I've also learnt songs and poems. I particularly enjoy learning songs taught by the teacher.

For Janmashtami, I learned a song called "*Piya Tose*." I confidently sang it on stage, and both children and teachers enjoyed our performance. I actively try to speak in English with my friends and teachers.

I've read several books, such as "The Adventures of Henry Rabbit," "Little Women," "Tarangini," "Nancy Drew Note Book," "Stilton and the Princess Emerald," "Funny Stories," "Jane Eyre," "Aladdin and the Magic Lamp," "20,000 Leagues Under the Sea," "School Jokes and Riddles," "Miss Sue Has No Clue," and "Samurai." I enjoyed reading these stories and learnt many things from them.



Currently, I'm reading a 10th-grade book and find it quite enjoyable because it contains interesting stories. I've already completed four chapters from the book and have taken the tests, receiving good marks.

Social Science

In our social science class, we are studying the 8th book of Ratna Sagar. I enjoy this book as it offers valuable learning. We have covered 15 chapters in history, and after each chapter, we answer questions and take tests. I strive to perform well on these tests. In geography, I have completed 7 chapters and sometimes find topics like natural resources and vegetation

challenging. Despite the difficulties, I aim to improve my test scores. We also have a test for the chapter of civics.

Art

In art class, we explore various types of drawings, such as nature and human figures. We also engage in craft activities like making flowers, spoons, fish, and other items. I particularly enjoy art class because I love creating drawings.

Dance

I have a strong interest in dance and have learned various dance forms for different school programs, such as Deva Sir Ganesh and Goa Tribal Dance. I quickly catch on to new dance steps when taught by the instructors. Dance class is held once a week, and sometimes we even choreograph our own steps after hearing a song. Currently, we are learning the Punjabi dance.

Odia

I have a good grasp of Odia and understand the language well. I sit properly in class, concentrating on my lessons. While my speaking skills require some improvement, I am actively trying to use Odia in my conversations. I am comfortable with alphabets and can confidently read small books. I write well, although there's room for improvement in matras. I love singing songs, and I've learned "Sura de Taala de." In Odia class, I enjoy hearing stories, reading storybooks, writing, taking dictation, and learning new songs like "Sura de Taala de." I have improved my ability to speak in Odia.

Music

Our music class takes place once a week on Mondays. I play the flute and have learned various Sargams. In our class, we focus on Sargams as some of my friends struggle with proper blowing technique.

Computer

Our computer class focuses on enhancing typing speed. I practise typing and sometimes engage in painting activities. When I feel bored, I play typing games. Typing is something I enjoy, and our instructor has also taught us how to print documents.

Gardening

In gardening, we engage in planting, watering plants, and removing weeds. I particularly enjoy gardening, even though I occasionally arrive a bit late. Our teacher may scold us when we are not punctual.

Celebration

I actively participate in various celebratory activities, including dance, song, dramas, and poem recitations. I have performed dances like Goa Dance on 5th July and

Ganesh Dance during Ganesh Chaturthi with my friends. We sometimes create our own steps for dance routines.

Meditation

In meditation sessions, we engage in prayer, singing songs, chanting, and mantras. Occasionally, some children may become playful during chanting.

Games

I love playing games and am consistently punctual and regular in the playground. Our routine includes a 2-minute prayer followed by running and joint exercises. We then play various games according to our turn. We engage in football, Frisbee, volleyball, basketball, and base kick. My favourite games are football and basketball.
