

MADAN MUDULI

Date of Birth: 7th May 2003

New Creation

Madan is a quiet and shy boy. He does not speak very much, so it is difficult to know how much he has understood. All these years Madan has been hard working and focussed. However, last year, when he had to concentrate most, it was not so. He was distracted very easily and one could see that he was wasting time very often. This reflected on his studies.

If he wants he can do much better with a little self control.

English

I did English with Sangita didi. In English we completed most of the chapters as well as the grammar exercises. I was good in grammar but my handwriting was very bad. In English my understanding skills were good but writing and sentence formation was poor. I was quite good in dictation. Out of my 5 subjects, I was good in English. When there was English homework given, then I would complete the homework and then study other subjects.

Math

In maths I did most of the chapters with Srinath bhaiya. We had to complete the whole syllabus in 2-3 months and we completed the chapters and started revising for the tests that were given by Srinath bhaiya. In maths my favourite chapter was quadrilaterals and circles. I was a bit confident in these chapters. In maths my worst chapter is polynomials and factorization. In these I could not remember the identities. In maths I was lagging behind all my classmates because of factorization which took time for me to understand. But I tried my best to improve and to get clarity. I would do only math in some of the time which I got because I was the only one who was behind the others. I was not concentrating and getting distracted and I was a bit nervous because I could not get clarity in maths.

When we came to Delhi, maths and science we studied with Veerinder didi. Didi made us do algebraic expression, linear equations in two variables and chapters which needed revision. I liked didi's class because didi would make us understand the concept and give homework. Sometimes when we had completed the chapter, she gave us a test. In these tests sometimes I got good marks.

Social Science

When Annapoorni didi came to Kechla, she taught us history. In history classes she would first give us good notes and make us understand the chapter. At the end of the class she gave dictation from the chapter that we had covered that day and in this I was very good. Sometime when our chapter was completed, she would give us test and in these test sometime I scored good marks. Didi gave us notes of all chapters of history, as well as test. I like history class because history is like story telling which makes me curious and excited. I learnt more about history and about our past. We completed our geography with Kamala didi. In geography didi made us do lots of writing work and gave lots of test.

Didi also made us watch movies related to geography and I got more inspired and motivated in the movies which would be related to various techniques of uplifting agriculture and new machines which are used in agriculture. I liked didi's class. Between history and political science, I like geography because it describes the physical features of our earth.

I did political science with milan ma'am. She made us do a lot of writing work and also gave us tests after the chapter is completed. Political science I found a bit tough, because I could not remember the points and functions of the government, but I tried my best.

Didi also made us watch movies related to geography and I got more inspired and motivated in the movies which would be related to various techniques of uplifting agriculture and new machines which are used in agriculture. I liked didi's class. Between history and political science, I like geography because it describes the physical features of our earth.

Science

In science I am very fond of studying physics because physics relates with our day to day life. When we came to Delhi to study science, we had classes with Prakash bhaiya. In Prakash bhaiya's class I would concentrate and focus on the board but sometimes when Prakash bhaiya asked me some questions or the definition, then I would be able to answer, but sometimes I could not. It was just because I could not understand. In physics class, bhaiya gave us numericals and I would be able to solve the numericals. When Prakash bhaiya would give us test, I scored well. In the lab I would fiddle with electrical materials such as motors and LED bulbs, just do experiment. I like doing experiments because it inspires and motivates me.

We studied chemistry with Meeta didi when she had come to Delhi to teach us. In chemistry this time didi gave us a test everyday or twice a day and we also did the chapters which we hadn't done in Kachla. In chemistry I was quite good in theory but in numericals I didn't get the concept but I tried my best to get it. In organic chemistry I was a bit poor because in organic chemistry we had to remember the names of alkanes, alkyne,s etc. and also the group names. In these tests I sometimes scored good marks but most of the times I got poor marks. I liked chemistry because in chemistry I was more interested in matter in our surroundings.

We studied biology with Veerinder didi. In her class didi would make us understand the function of the cells and all types of cell organisms. In Veerinder didi's class this time, we just revised the chapters and did the tests with her and in these tests I did quite well because I knew some the chapters very well.

Hindi

In Delhi I studied hindi with Yogesh sir. He taught many of the chapters quite well and I would understand the meanings of the poems and could write some the questions and answer well. But the only problem was that I could not explain the poems and sometimes in class I was sleepy. I just like this language. It is because it is the national language of india.

Sports

In sports I like football most. This is because I like to shoot goals. This time I improved my ball control, passing and many of the skills. In Delhi we had a match with MIS and in this match we tried to score many goals, but we did 2 goals. The sewere scored by Jagat and Lalu. MIS scored 3 goals.

We had a race or marathon on MIS track. I participated init. I didn't want to win but I wanted to complete 7 rounds without stopping. I like running because it develops my stamina

In basketball I am good at defending but I also like to shoot. I play very roughand commit many fouls. My dribbling is good but I usually don't pass.

In swimming this time I did not do many laps but I tried to swim long distance.
