Manya Gouda

DOB- 20 October 2009

Report for 2023-24 (First Term)

Attendance- 181 out of 183 days

INTRODUCTION

the school and like all the subjects. I am 14 years old and from Sukliguda. I live with my aunt and uncle, and my goal is to become an air hostess. My favourite colour is blue. In my family, there are four people, and I love my family. I like reading storybooks, and I prefer to spend time with friends rather than being alone. Our holiday is on Tuesdays.

YOGA

I'm regular in yogasana, which we do at 6 a.m. every morning. We practice various asanas like Savasana, Ushtrasana, Dhanurasana, and Bajarasana. We always do Surya namaskar 12 times. I like doing yoga very much and am punctual for yoga class.

SHRAMDAN

I participate in various types of shramdan, such as gardening, hostel cleaning, toilet cleaning, school cleaning, and kitchen work. I don't like cleaning toilets but enjoy sweeping. In the kitchen, I like cutting vegetables. I generally like all types of shramdan, but sometimes I don't enjoy gardening early in the morning.

SCIENCE

In science, I covered topics from the 8th-grade book, including chapters on friction, sound, natural phenomena, and the chemical effects of electric current. When I encountered difficulties with specific chapters or definitions, I hesitated to ask my teachers, resulting in occasional scolding. After completing each chapter, we would practice solving questions and then take tests on that material. Sometimes, I found it challenging to stay focused in class, and though I was generally punctual, I tended to be late on Tuesdays when coming from home.

I particularly enjoyed conducting experiments in class. Some of the experiments we performed included observing the oscillatory motion of a pendulum and testing whether various objects around us were insulators or conductors. However, there were times when I got bored, leading to moments when I did not pay attention to the teacher and ended up falling asleep in class.

During tests, my scores would vary, sometimes exceeding ten marks and occasionally falling below ten out of 20. When I failed a test, I had the opportunity to take a retest. We also had the chance to examine a plant cell using a microscope. As my exams drew closer and I continued to struggle with science, I made the decision to switch to home science.

MATHS

In class, I was doing the 6th book and found it enjoyable. I have covered chapters on whole numbers, fractions, and algebraic expressions, although some were difficult for me to understand. I try my best, and we take tests after completing each chapter. My calculations are not very fast, but I'm working on improving. I particularly like math because it challenges me to calculate quickly.

HINDI

In class, I prefer self-reading, and I don't enjoy group reading because some of my classmates read very slowly, and it feels boring to me. My writing skills in Hindi class are very good.

After group reading, didi gives us dictation, and sometimes I make mistakes with difficult words. However, I have been improving in dictation. Sometimes, didi instructs us to do copywriting from the book.

In grammar, I was studying the 6th-grade book, and I found it very easy. However, there are moments when I don't understand some of the grammar questions.

As for the 7th-grade book in Hindi, I found it relatively easy, but I struggled with the questions related to poems. In the final test of the whole book, I scored 24 out of 40. We used to write stories from our imagination, and didi would check them. Through this, I have improved my writing speed. Now, I am studying the 10th-grade book in Hindi, and I can handle it well, except for the poems, which I sometimes find challenging. However, didi helps me understand the poems, and after studying one chapter, we take a test.

ENGLISH

I enjoy my English classes. We cover various aspects, including comprehension, communication, and

grammar. Didi used to teach us English songs, which I found quite interesting. During group reading, there were times when I felt drowsy because I couldn't always follow the book. However, I really like free reading. We also played English games and learned poems, which I found enjoyable. I have a particular liking for grammar.

Didi used to read stories, and then we would write about them. Sometimes, when Didi asked us to write, I felt a bit bored. I have read many books like "Harry Potter," "Beast-Loved Fairyland," "Cake and Ale," "The Body in the Library," and works by R.K. Narayan.

Most of the time, I enjoy singing songs. However, there are occasions when I don't particularly like the English class because I don't enjoy writing. Currently, I've started the 10th book of the NIOS English course. While I generally like the book, there are times when I struggle to understand poems. In such instances, I approach Didi, who helps us better comprehend the material. Overall, I have a positive attitude towards my English class.

SOCIAL SCIENCE

In social studies, I have finished some history chapters, such as colonialism, urban change, changes in art, painting, and the growth of nationalism in India. Some chapters are difficult to understand, but I always try my best. In geography, I've completed chapters on natural resources, vegetation, wildlife, minerals, and power resources, which I like very much. Political science is a bit difficult for me, but I'm trying my best to understand it.

ART

In art class, we do painting and cutting and pasting. We draw pictures and then cut shells on top of the drawings. Didi teaches us drawing very nicely, and I also enjoy doing painting. We have also worked on stencils by cutting out shapes from colourful paper and pasting them on white paper.

GARDENING

I like to water the plants. When bhaiya tells us to remove the grass, I do it, but I don't enjoy it when it involves digging. Sometimes, I don't like gardening.

DANCE

I performed a dance during Ganesh Puja, and I liked it very much because it had nice steps. Initially, I found it challenging to learn the steps quickly, so I practiced. Currently, I'm learning the Bhangra dance and can do it. I sometimes enjoy dance class. When

didi teaches us a dance, I like to learn it. We performed the Goa dance on July 5th, and I liked it a lot, especially since it was my first time.

COMPUTER

In computer class, I don't like doing painting but I enjoy it. I find computer class enjoyable because we do many activities like PowerPoint, 3D painting, and typing tests. I'm always on time for computer class.

MUSIC

In music class, we learn the "sargams" and play the harmonium. I particularly enjoy playing the harmonium and singing songs. Our teacher, Didi, teaches us various sargams. Although I like playing the harmonium, there are times when I don't feel like singing the songs. She Sits properly, punctual for class, takes less interest in singing but has a good voice, sometimes sits quietly, has learned sargams and alap. In music class, we learn sargams and play the harmonium. I like to play

the harmonium and also enjoy singing songs. Didi teaches us many sargams. Sometimes, I don't like to sing the songs, and I write some sargams in my notebook. Didi also teaches us raags.

GAMES

I enjoy playing games, especially running exercises. Before games, I always do running and exercises to avoid injuries. I play various games like football, basketball, volleyball, frisbee, and sometimes minor games. I like playing basketball the most and practice dribbling, different types of lay-ups, and guarding skills. I am always on time and regularly attend games.

MEDITATION

During meditation, we do chanting and sing songs. I enjoy singing songs in both English and Hindi. We also learn new songs sometimes and meditate silently.

CELEBRATIONS

On July 5th, I had a drama role as a villager, which I liked. On August 15th, I participated in the freedom fighter drama and played my role nicely. We also did the Goa dance on July 5th. On September 19th, we performed a dance for Ganesh Puja.
