Vidur Jani

DOB- 23rd March 2011

Report for 2023-24 (First Term)

Attendance- 183 out of 183 days

Introduction

I am Vidur Jani, 12 years old, and I attend Auro-Mira Vidya Mandir School in the 8th grade. I'm actively working on improving my attitude. I attend all my classes and am punctual for everything. I have a strong passion for playing games and studying in school. My favourite game is football, and I have a fondness for eating poha and paratha.

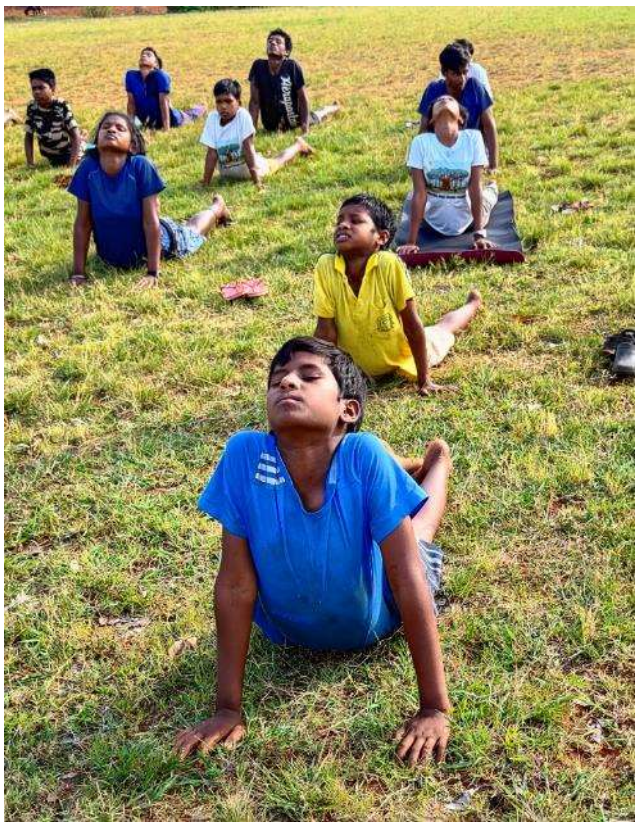
Shramdan

During shramdan, I contribute to various activities, including kitchen work, school cleaning, toilet cleaning, hostel cleaning, gardening, and girls'

hostel cleaning. I particularly enjoy gardening and school cleaning. In gardening, I either water the plants or occasionally dig and add manure to them.

Yoga

In yoga, I participate in warm-up exercises and practice different types of asanas, including Surya Namaskar, Padmasana, Chakrasana, Naukasana, and more. I enjoy attending yoga sessions, but not consistently. However, I always make an effort to be punctual for yoga.



Science

I am currently studying the 8th-grade living science curriculum. I have successfully covered six chapters and am presently engaged with the topic of "Refraction and Dispersion of Light." While I encountered some difficulties with a few chapters, I maintain a deep interest in science, especially when it involves intriguing facts presented by our teachers.

One of the aspects of science class that I particularly enjoy is conducting experiments. Throughout our lessons on topics like light, sound, and force and pressure, I have had the opportunity to engage in numerous hands-on experiments. For instance, in the chapter on light, we performed experiments

to confirm the laws of reflection. Additionally, we experimented with tuning forks of varying frequencies, which allowed us to hear different sounds. I found these experiments to be highly engaging and informative.

In the realm of sound, we delved into the fascinating world of oscillatory motion by observing a pendulum. This provided valuable insights into the principles of sound. Currently, in the chapter on "Refraction and Dispersion of Light," I am learning how to create ray diagrams for convex lenses and understand their characteristics. This aspect, although occasionally challenging, has been an enjoyable learning experience.

I actively participate in class discussions and maintain a strong focus on the subject matter. When I encounter doubts or questions, I am not hesitant to seek clarification from my teachers, as I believe this is crucial for a deeper understanding of the subject.

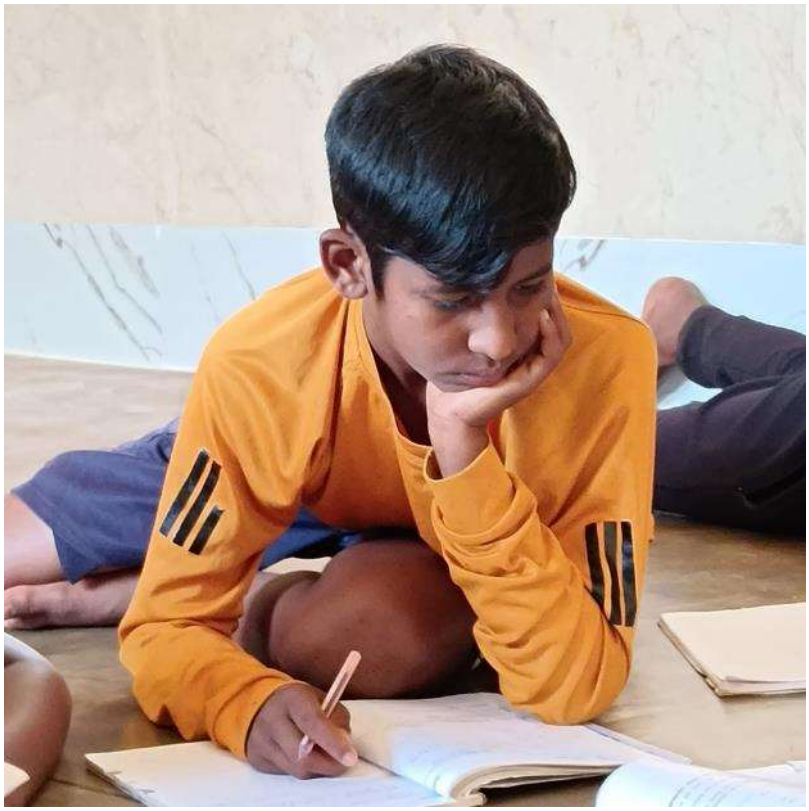
Overall, my passion for science, my enthusiasm for conducting experiments, and my active participation in class discussions drive my engagement with the subject. While I have faced challenges in some chapters, I am committed to enhancing my understanding and

knowledge. If you have any additional inquiries or require further information, please do not hesitate to ask.

Math

In maths, I am currently working on the 7th-grade book, and I must say, I quite enjoy it. I have successfully completed the first 12 chapters. While I generally find math enjoyable, some of these chapters presented a bit of a challenge. Despite that, I was pleased to find that I performed well in the chapter-wise tests. In particular, the chapter on the unitary method stood out as I scored full marks, which made me very happy.

I typically understand the concepts well when explained by the teacher, but there are moments when I struggle to grasp them fully. These moments of difficulty usually arise when I am working on the exercises, which I aim to improve upon.



Hindi

In Hindi class, I am currently studying "Basant Bhag-1". I am focused on my studies, and I particularly enjoy reading and listening to stories. However, I tend to get distracted in class and sometimes disturb my classmates by talking to my side-bencher.

During my free reading time, I prefer reading comics and shorter books. I admit that I struggle with grammar; some chapters are challenging for me, although there are times

when I do understand them. I recognize the need to improve both my handwriting and my grasp of grammar.

English

In my English class, I engage in various activities such as free reading, group reading, singing songs, and working on my Communication book. I'm happy to share that I've successfully completed the fourth book in the Communication series.

When it comes to free reading, I'm particularly fond of stories with moral lessons, Amar Chitra Katha, and comics. In group reading, I've explored the world of Harry Potter.

Not only did I understand the story, but I also had the pleasure of watching the movie adaptation, which was enjoyable. However, I don't find grammar exercises very enjoyable.

Currently, in our group reading sessions, we're delving into R.K. Narayan's book, "Swami and His Friends." I'm finding the story quite comprehensible.

During our school's birthday celebration, I participated in a play. I took on the character of a tree. I quickly learnt my lines and genuinely enjoyed the experience.

For Janmashtami, I sang a song titled "*Piya Tose Laga Jo Ye Mann*." It was an easy and enjoyable experience. I'm pleased to note that I'm making improvements in my speaking skills.

Social science

I am following 8th class book from March. I have covered 8 chapters, I find certain chapters difficult. I would find geography boring but now it’s much more interesting. I

like disturbing the teachers and by friends. I like answering verbally rather than writing. Many time I don’t complete my homework.

Computer

In computer class, I'm learning typing, and I'm currently on lesson 7. I acknowledge that I need to improve my typing skills because I'm a bit slow at it. However, I'm always punctual for class and attentive to my teacher's instructions. I've also learned how to print papers, which I found quite easy.

Art

I engage in various activities such as painting, stencil cutting, crafts, and drawing.

Although I try to focus in class, I sometimes get distracted by my friends. I have a liking for painting but understand that there's room for improvement.

Dance

I've participated in dance activities, such as the

one on July 5th, which I found easy to learn. I've also performed a dance for Ganesh Chaturthi and am currently learning bhangra.

Odia

I am following the 'Sisuse Bohi' course for class one. I have a strong interest in this book and am actively working on improving my Odia speaking, reading, and writing skills. I am consistently punctual for Odia class, and I always listen to my teacher and respect their guidance.

Celebrations

I've taken part in various celebrations, including dancing on July 5th, singing for Janmashtami, and dancing for Ganesh Chaturthi. I derive great pleasure from participating in these dances and singing songs during celebrations.

Meditation

I sing songs and also learn various types of songs. I enjoy gossiping with my friends. I strive to be punctual for meditation, although it's not always consistent. I make an effort to listen to my teacher during meditation sessions, although there's room for improvement. I generally like meditation but may find it less appealing when I get bored.

Games

I actively participate in football, basketball, and volleyball. I've made some progress and continue to work on enhancing my skills in all these sports. I particularly love playing football and find joy in learning new football skills.
