Jahnvi Gouda

DOB- 15th July'14

Attendance- 183 out of 183 days

Report for 2023-24 (First Term)

Maths

Jahnvi is diligently working through her second book and aims to complete it to move on to the third book. She demonstrates strong concentration, but occasional laziness can cause her to become stuck on a single question. However, she enjoys mathematics, takes interest, and strives to develop her thinking and memorization skills.

Projects

Birds

Jahnvi, a bright student, eagerly delved into the world of birds. While she knew some bird names in the local dialect, she improved her knowledge by learning their English names. Jahnvi's attention span could benefit from improvement,

and she was encouraged to participate more actively in group discussions and enhance her listening skills. While she could differentiate between various bird species, she occasionally encountered confusion regarding their features and body parts. Her interest in birds grew as she learned new vocabulary, and she diligently sought to answer questions during class sessions. Her book contained both bird drawings and descriptions, reflecting her commitment to the topic.

Occupation

Jahnvi wants to become a tailor when she grows up because she wants to make her own styles of clothes and more beautiful dresses. She liked to do this topic because she got to know many new things about occupation and how many types of works are there. In the class when she was asked some questions, then she was not able to answer some of the questions. She had made a very beautiful drawing of a tailor.

Hindi

Jahnvi's performance in her studies is commendable, with fluent reading abilities and a proactive approach to seeking assistance when encountering challenging words. Although her reading skills are strong, her voice during reading is often too soft. In weekly group reading sessions, she reads well, though she would benefit from a louder projection. Her spelling skills shine during dictation exercises, and her handwriting is notably neat and clean. She has mastered the basics of grammar, including *gender* (*ling*), *numbers* (*vachan*), and *vand vichhed*. Although she faced some initial challenges in understanding these concepts, repetition and dedication improved her comprehension. She exhibits a willingness to invest time and effort in solving questions independently. Learning *Havan mantras* was a formidable task initially, but after observing her peers' efforts, she developed an interest and rapidly memorised them. Jahnvi has also acquired new songs and poems and has taken an interest in emulating bird sounds.

English

Jahnvi is a charming and reserved student who demonstrates great attentiveness in class. She is an attentive listener, whether it's the teacher or her peers who are speaking. While she faces challenges in speaking English fluently, she puts forth her best effort. Jahnvi encounters difficulty

pronouncing certain words during reading and conversation, and to overcome this, she seeks guidance from her teacher.

Her handwriting has shown improvement, but there is room for enhancement in her spelling. Jahnvi is capable of reading storybooks at levels 3-4, and when she encounters words that pose difficulty, she isn't hesitant to ask her teacher for assistance. She diligently completes her homework when assigned.

Jahnvi needs to become more attentive in class and avoid being off-minded or sleepy. She is good at singing, reciting poems, and participating in plays. Although she takes time to learn, she retains information for an extended period. She enjoys watching English movies but should speak more in English to enhance her understanding.

Odia

Jahnvi enjoys the Odia class. She is able to understand the language quite a bit and tries to speak it by using just a few words. She has learnt some of the alphabets and can form very simple sentences using those alphabets. She takes keen interest in listening to stories and enjoy singing songs. She has learnt a few names of the things around.

Arts and Crafts

Jahnvi likes to do art because she likes to make drawings of nature and when she makes imaginary drawings, she makes them very beautifully. Often they make

drawings for the topics. She is able to make the drawings all by herself and she draws nicely and neatly.

Puzzles

Jahnvi takes pleasure in solving puzzles because she possesses the ability to complete 60, 70, 80, and 100-piece puzzles. When it comes to 100-piece puzzles, she partners with someone for assistance. Jahnvi is focused and enjoys puzzle-solving in a quiet

and contented manner.

Games and Sports

She is in Carbon group during games. She has good stamina to play. Her body is flexible and she can do ''Dhanurasana'' perfectly.

Trip- For more details, refer to the school report.
