Raghav Deulia

DOB- 10 March 2010

Report for 2023-24 (First Term)

Attendance- 183 out of 183 days

Introduction

My name is Raghav, and I study at Auro-Mira Vidya Mandir. I am currently in the 8th grade and 13 years old. My hobbies include playing football, reading, cycling, and many other activities. My dream is to become an engineer in the future.

Shramdan

I actively participate in shramdan, taking on various tasks like gardening, kitchen work, school cleaning, girls' hostel cleaning, and toilet cleaning. I find school cleaning the most enjoyable. It includes tasks like sweeping, cleaning urinals, and clearing spider webs. I appreciate the value of shramdan.

Yogasan

I attend yogasan classes regularly, although there are instances when I can't make it due to room cleaning or kitchen duties. I sometimes

dislike doing yogasan in the morning, but I understand its health benefits. I try to listen to the teacher during these classes.

Science

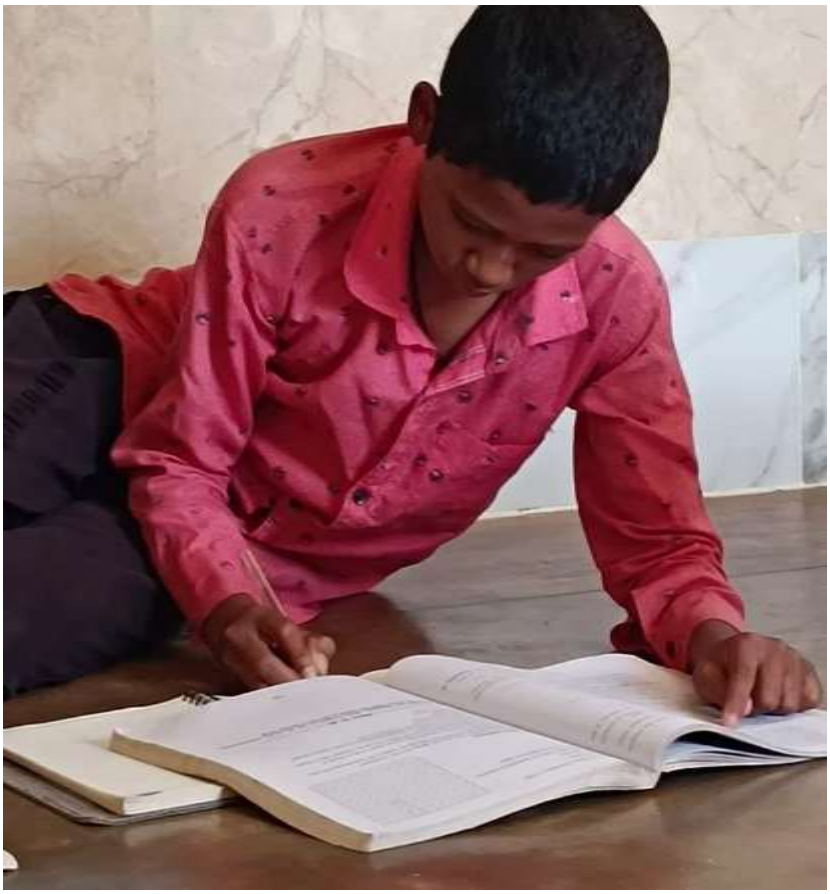
I am currently studying the 8th-grade science curriculum, and I have successfully completed several chapters, including "Force and Motion," "Pressure," "Friction," "Sound," and "Reflection of Light." I am currently engaged in studying the chapter on "Refraction and Dispersion of Light." In these chapters, I have had the opportunity to conduct various experiments and gain practical insights into the subject matter. For instance, in the "Sound" chapter, I explored oscillatory motion through experiments. In the "Reflection of Light" chapter, I had the chance to prove the laws of reflection using alpines, paper, a plane mirror, and a ruler.

Currently, as I delve into the "Refraction and Dispersion of

Light" chapter, I am encountering some challenging new concepts and terminology. However, I am committed to continued learning and believe that with perseverance, I will become more familiar with these concepts. I am highly engaged and active in the classroom, always eager to participate in discussions and respond to questions posed by our teachers. I also make an effort to ask relevant questions about the topics we are studying.

Overall, my dedication to learning and participation in class discussions will help me overcome any difficulties I encounter while studying challenging scientific concepts. If you have any further questions or require additional information, please feel free to ask.

Maths



I'm currently studying the 6th-grade math book and have completed up to Chapter 8, now working on Chapter 9. Some chapters, like integers, were easy for me, while others were more challenging. During lessons, I pay attention to the teacher, although there are distractions from noisy classmates. If there's something I don't understand, I ask the teacher for clarification. After finishing a chapter, the teacher gives us a revision test, but I struggle to remember all the concepts and rules. This affects my test performance.

Hindi

`I have completed the 5th-grade book in Hindi and passed the test. However, didi informed me that I need to retake the test because I made many spelling mistakes. Now, I have started the 6th-grade book. In free reading, if I come across a word I can't read, I ask my friends for help. If they are unable to read it as well, then I go to didi to ask about the word. My handwriting is not very good, and didi told me that if I write like this in the exam, I won't receive full marks. So, I am working on improving my handwriting.

In dictation, I don't write well, and my spellings are not very good. Didi has advised me to write words five times to improve my dictation skills. In group reading, we all read a book together. I don't enjoy it much because some of my friends struggle to read well and read slowly. When it's my turn to read, I can read properly and at a moderate speed.

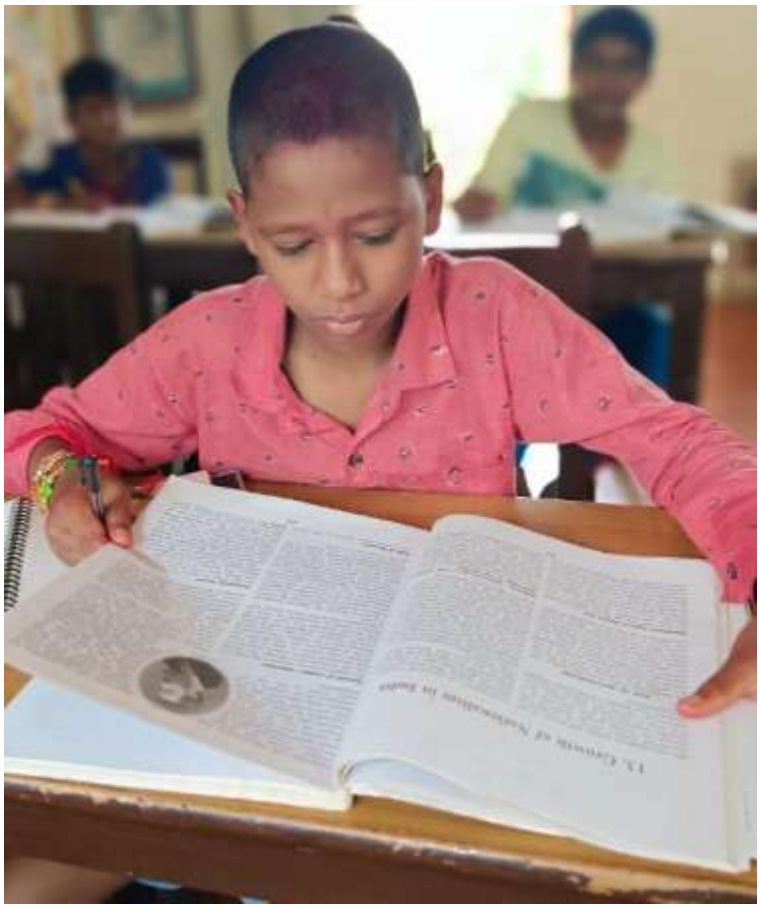
I am currently studying the 5th-grade grammar book in Hindi, and I am very interested in it. If I face difficulties, I go to didi to seek clarification. Sometimes, my classmates on the side bench disturb me, and I get irritated and scold them. I am always attentive in class. We do various activities in class, including story writing, copywriting, group reading, self-reading, and dictation.

English

I've completed the 4th-grade communication book, and I enjoyed working through it. I finished the communication book quite quickly because I did it orally with didi (our teacher).

Whenever didi assigns homework, I complete it and bring it to the class. Currently, I'm studying the 5th-grade grammar book. However, I must admit that these days, I don't enjoy doing grammar as much because sometimes I find it confusing. I also engage in singing English songs and reciting poems like "Krishna," "Who," "Tree," "Surrender," etc.

I've learned essay writing and message writing, but I must admit I'm not entirely clear on these types of writing. I also participate in group reading. I've read a Harry Potter book and R.K. Narayan's "Swami and His Friends." I find the book comprehension quite enjoyable, especially when didi reads and explains it to the group. I make sure to take a test at the end of the week to evaluate my understanding of what I've studied. For Janmashtami, I learned a song, and it wasn't too difficult to learn; I managed it in just two days. On the 5th of July, I participated in a play where I was given the character of a man. I've read many books like "First Hunt," "Horrid Henry," "Panchatantra," etc. While I enjoyed some of the stories, there were others that I didn't quite like because I didn't fully understand them.



Social science

In social science class I am doing book 8th. In History currently I am doing chapter 16th, and in Geography I am in the 8th chapter. I can understand history but I don’t like to give tests. I find Geography the best and I have not stared civics.

Odia

In my Odia class, we read books and practice copying stories and words. I try to read words nicely, and if I come across a word I can't read, I ask the teacher for help. I like attending this class because I understand its importance in life.

Music

I play the flute in music class. Although I'm not proficient, I've improved compared to before. I can now play exercises and attend class on time, although occasionally I might be delayed due to taking a bath.

Computer

I enjoy data class where we practice typing and drawing. The teacher helps us improve our typing speed, and I've seen progress. We also learn about printing. My typing speed is better than before.

Dance

In dance class, I learn various dance forms with teachers like Brishti didi, Gauri didi, and Suparna didi. We even performed a dance for Ganesh Chaturthi, and I wasn't scared on stage because I was dancing with my friends. Currently, I'm learning "bhangra" and have already mastered half of it.

Art

I like art class, where I work on drawing, painting, and other creative projects with Brishti and Suparna didi. Currently, I'm learning stencil cutting, although I find it a bit challenging and sometimes lose interest. We're also working on making a pencil stand.

Games

I play basketball, football, and volleyball during games time. I enjoy football and volleyball but have reservations about

basketball. I believe it's more for girls, and my height makes it challenging to compete with taller friends. I start with running and exercises before playing, and I'm punctual for games.

Meditation

I practise meditation every evening from 6:15 to 7:00 pm, where I arrive on time. During meditation, we sing songs and play games like "antakshari." I find meditation to be a peaceful and quiet time.
